1 INTRODUCTION

Australia is a country with a huge amount of meta to learn. This guide is intended to cover only the most important clues that you will encounter quite often in rounds. This guide is not intended to teach you how to identify Australia, but rather how to region guess within the country itself.

2 GENERAL

2.1 License Plates

Credit - zi8gzag

The most important and distinctive is NSW yellow plates, but it is worth learning all of them.

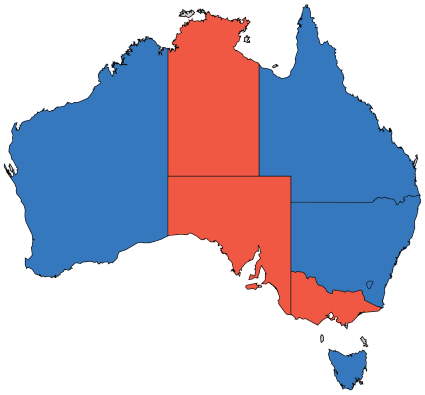

2.2 Traffic Lights

Border

No Border

Blue = border, Red = no border

The two different styles of traffic lights. NOTE - the border cannot be seen from behind.

2.3 Short Reflectors

Short Reflector

Standard

Short reflector on bollards are very common in Queensland and South Australia, and somewhat common in Tasmania. Circle reflectors are not the same as short reflectors, don't get them mixed up!

2.4 Road Naming System

- Western Australia uses shielded road numbers and does not include letters
- Victoria and Tasmania are the only states to have C roads
- There are numerous other rules states use when naming roads. It may be worth checking the map and seeing if you can find the style of road naming you see in the round

3 NEW SOUTH WALES

3.1 Guardrail Ending

NSW + ACT Style

Other States

NSW guardrail endings are yellow and black, while other states are black and white.

3.2 No Stopping Sign

NSW Style

Other States

Keep in mind this is only for no stopping signs. NSW uses a white no parking sign like other states.

4 VICTORIA

4.1 Pole Top

This style of pole top is exclusive to Victoria. It may also be found without the top coil.

4.2 Blue Square Pole Marking

This small blue square on poles is found all throughout Melbourne.

4.3 Bollard

This style of bollard, and slight variations of it, is common in suburban areas across Victoria.

4.4 Bus Stop

All bus stops in Victoria use this style.

5 QUEENSLAND

5.1 Pole Markings

Typically found in Brisbane and surrounding areas

This long white strip is found basically everywhere else

These styles are both exclusive to Queensland. A handful of other styles can be found, but these are by far the most common.

5.2 Orange Sign Border

An orange border on a sign is common in urban areas of Queensland. NOTE - a similar style can rarely be found in the ACT too.

6 WESTERN AUSTRALIA

6.1 Yellow Sign Posts

Sign posts painted yellow are only found in WA. Not all are yellow, but the majority are, particularly in Perth.

6.2 Pole Markings

Colours may be flipped

Both are exclusive to WA and are generally in the Perth area.

6.3 Pole

This specific style of pole with the painted green bottom is common in WA.

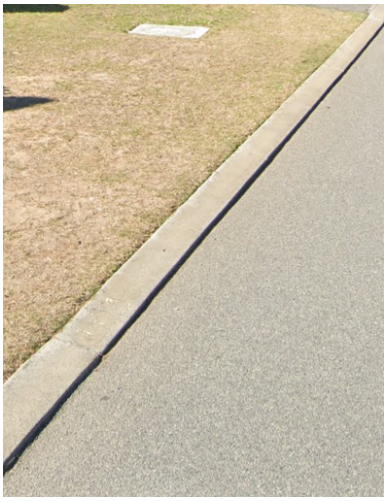

6.4 Bollards

These bollards are exclusive to WA and are generally found in rural areas.

6.5 Sloped Kerbs

Sloped

Standard

Sloped kerbs are not exclusive, but are most common in WA.

6.6 Red Soil

Red soil is by no means exclusive to WA, but is found almost everywhere in the state.

7 SOUTH AUSTRALIA

7.1 Stobie Poles

Often referred to as 'oreo' poles, 99+% of poles in SA are stobies. If you see only wooden poles, you are almost certainly not in SA. NOTE - Tasmania also has some stobies in urban areas, but they are a slightly different style. Stobies may also rarely be found in Broken Hill and the ACT.

7.2 Outer Line Gaps

The gaps are being discontinued, but they are still common in older coverage and rural areas. NOTE - ACT also has outer gaps, but always with a reflector in the gap.

7.3 Leaf

A leaf in the camera is almost always found in SA, generally around Mount Gambier or Renmark. A similar leaf can be seen in Victoria, but it is much rarer and is in hillier areas, while the SA leaf area is almost all relatively flat.

7.4 Flat Sign Posts

Flat Post

Standard Post

SA and Western Australia are the only states to use flat sign posts with visible bolts, while other states only use the rounded style. Western Australian posts are generally yellow though.

7.5 Property Marker

This specific style of marker is found on the side of the road in rural areas and is SA exclusive.

8 TASMANIA

8.1 Olive Green Possum Guard

These possum guards (SPECIFICALLY OLIVE GREEN) are almost always in Tasmania.

8.2 Camera Glitches

Camera glitches can be found elsewhere, but are most common in Tasmania.

8.3 Landscape

Tasmania is a hilly state; almost every round will have a hill somewhere, the only exception really being the northernmost parts.

9 NORTHERN TERRITORY

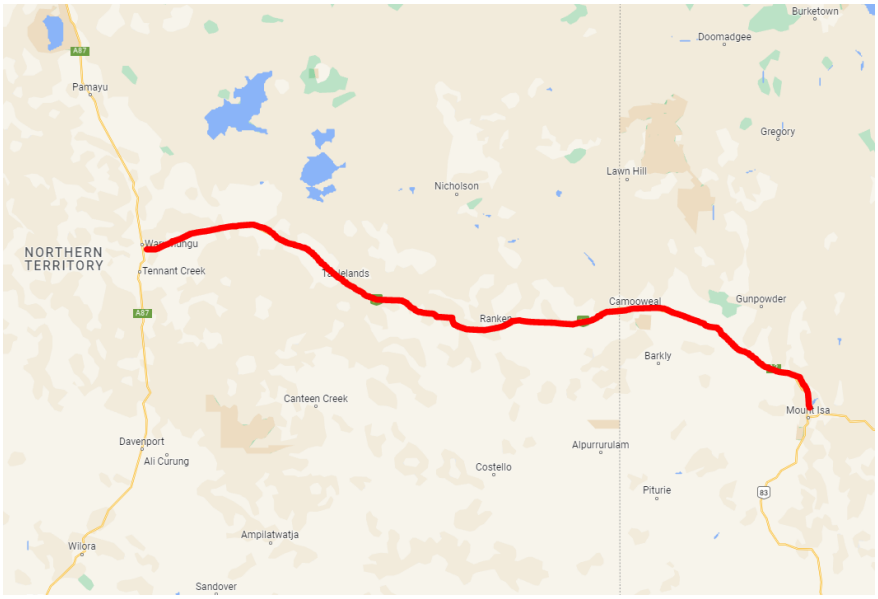

9.1 Metal Poles

Similar to South Australia, the NT uses almost no wooden poles. 99+% of poles are this style. NOTE - a similar style can be seen in Western Australia close to the NT border.

9.2 Lens Smudge

This smudge in the lens is found on the 66, and goes into the A2 in Queensland to Mount Isa. It is also present for a small portion of the A87.

9.3 Landscape

Eastern states can be very difficult to distinguish by landscape, but the NT's is very unique. I would recommend playing a Northern Territory map or just playing an Australia map and taking note of the landscape on NT rounds - it can be learnt quite quickly. The only places you should get it confused with are northern WA and QLD near the border.

10 AUSTRALIAN CAPITAL TERRITORY

10.1 Outer Line Gaps

The ACT uses outer gaps like South Australia, but always with a reflector in the gap. The ACT still uses gaps unlike South Australia, so you will see them on most major roads and in the latest coverage.

10.2 No Stopping/Parking Signs

The ACT is the only state/territory to have no parking/stopping signs that include text underneath the symbol. It also uses white no stopping signs unlike NSW.
